Interests

- **Artificial Intelligence & LLMs**
- **Generative AI & Content Creation**
- **Vibe Coding & MCP Integration**
- **Game Design**
- **Visual Design**
- **Technology & PC Hardware**
- **Video Editing & Digital Content**

COŞKUN DENİZ KARCI

I am a Digital Game Design student at Doğuş University. I use generative AI, large language models (LLMs), and vibe coding to build desktop applications, web platforms, game prototypes, and digital content. I integrate Claude, ChatGPT, and MCP connections into research, product planning, coding, visual/video creation and editing, automation, debugging, and testing workflows. I combine advanced 2D visual design experience with game engines and modern development tools, with a focus on problem-solving, user-centered design, and adaptability.

Experience

Independent AI Application Developer
I build web and desktop applications, game prototypes, and visual/video content with AI-assisted methods. I use Claude MCP connections to bring tools and services together for ideation, coding, content editing, automation, testing, and iteration.

Freelance Visual Designer (2020 – 2022)
Created logos, social media posts, Instagram highlight covers, and other 2D visual assets for clients through platforms such as Bionluk and Fiverr.

Independent PC Hardware & System Optimization
Hands-on experience in building PCs from scratch, detailed hardware cleaning, diagnosing hardware issues, formatting drives, and setting up fully operational operating systems.

Skills & Tools

Visual Design & 3D: Adobe Photoshop (Advanced), Adobe Illustrator, Blender (Basic)

Artificial Intelligence & LLMs: Claude, ChatGPT, Gemini, Prompt Engineering, Vibe Coding, MCP integrations, AI workflows

AI Content Creation: Image/video generation and editing, game and software prototyping, automation

Application Development: Electron, React, TypeScript

Video & Audio Editing: Adobe Premiere Pro, Adobe Audition (Intermediate/Advanced)

Game Development: Unreal Engine, Unity, Visual Studio, C# (Basic), C++ (Basic)

Office Tools: Microsoft Office Suite (especially interactive PowerPoint presentations with 3D content)

Featured Projects

Underwake - Game Prototype:
Playable Unreal Engine game prototype combining cinematic storytelling and action mechanics; development focused on scene flow, interactions, and Dash/Lasso systems.

Omni - Windows Desktop Application:
Developed with Electron, React, and TypeScript; a modular, customizable workspace bringing together tasks, notes, events, and connected services.

LudenOS Web Project:
An innovative website/platform for gamers, designed and developed independently from scratch with the active use of AI and vibe coding methods.

Cyber Rebirth Tabletop Board Game:
A turn-based strategy board game for which I independently created all 2D visual assets and card layouts.
