Coşkun Deniz Karcı

DIGITAL GAME DESIGN · AI & SOFTWARE DEVELOPMENT

PROFESSIONAL SUMMARY

Digital Game Design student at Doğuş University. I use generative AI, large language models (LLMs), and vibe coding to build desktop applications, web platforms, game prototypes, and digital content. I integrate Claude, ChatGPT, and MCP connections into research, product planning, coding, visual/video creation, automation, debugging, and testing workflows. Combining advanced 2D visual design experience with game engines and modern development tools, I emphasize problem-solving, user-centered design, and rapid technical adaptability.

EXPERIENCE

Independent AI Application Developer
2023 – Present

Develop web platforms, desktop applications, game prototypes, and digital media using AI-assisted methodologies. Employ Claude MCP connections and modern agentic tooling for ideation, full-stack implementation, content editing, automation, and iterative testing.

Freelance Visual Designer
2020 – 2022

Delivered brand identities, logos, social media visual systems, and digital promotional assets for international and local clients across Bionluk and Fiverr platforms.

Independent PC Hardware & System Optimization
Continuous

Hands-on technical experience building custom high-performance workstations, diagnosing hardware-level faults, OS tuning, drive management, and thermal optimization.

FEATURED PROJECTS

Underwake — Unreal Engine Game Prototype
Lead Developer

Playable Unreal Engine prototype combining cinematic storytelling and responsive action mechanics. Built around scene progression, interaction systems, and Dash/Lasso traversal mechanics.

Omni — Modular Desktop Workspace
Creator

Desktop productivity environment engineered with Electron, React, and TypeScript. Unifies modular task tracking, local notes, schedule events, and external API integrations.

LudenOS — Idea & Prototype Hub for Gamers
Full-Stack Creator

Next-generation social gaming platform developed with Next.js 14, React 18, Prisma ORM, and PostgreSQL. Features developer build logs, prototype showcases, and community feedback. Live demo: *project-ludenx-1.vercel.app*.

Cyber Rebirth — Tabletop Strategy Game
Visual & Game Designer

Turn-based strategy board game featuring independently illustrated 2D cyberpunk character cards, location boards, rulesets, and typography.

EDUCATION

Doğuş University
Faculty of Arts & Design

B.A. in Digital Game Design

Undergraduate Student

CORE SKILLS

AI & LLM Workflows

Claude, ChatGPT, Gemini, Prompt Engineering, Vibe Coding, Model Context Protocol (MCP)

Software & Web

React, Next.js, TypeScript, JavaScript, Electron, Tailwind CSS, Prisma ORM, Node.js

Game Development

Unreal Engine (Blueprints, Visual Systems), Unity, C# (Foundations), C++ (Basics)

Visual & 3D Design

Adobe Photoshop (Advanced), Adobe Illustrator, Blender (Basics)

Video & Audio Editing

Adobe Premiere Pro, Adobe Audition

Productivity & Tools

Git, GitHub, VS Code, Microsoft Office (Advanced 3D Presentations)

INTERESTS

Generative AI · MCP Workflows · Game Design · Vibe Coding · PC Hardware · Digital Storytelling

LANGUAGES

Turkish: Native

English: Professional Working
